PROFILE SUMMARY

Final-year B.Tech AI & Data Science student with hands-on experience in full-stack development, AI/ML pipelines, and GenAI application engineering. Proficient in Python, React, and cloud deployment. Built production-grade AI tools including a natural-language-to-code generator (RAG + LLM), agentic automation systems, and ML CI/CD pipelines. Seeking to apply AI-native engineering skills as part of the Cognizant Ace Team.

SKILLS & TECHNOLOGIES

Languages	Python, JavaScript / TypeScript, SQL
Frameworks & Libraries	React.js, Django, Flask, Express.js, Scikit-learn, TensorFlow, LangChain, LangGraph
AI / LLM	RAG Pipelines, Prompt Engineering, LLM Orchestration, Agentic AI (CrewAI / AutoGen), Embeddings, Vector DBs (FAISS / ChromaDB), Anthropic API, Gemini API
Cloud & DevOps	AWS (EC2, S3) Basics , Azure Basics , Git, GitHub Actions CI/CD, Docker, Vercel, Render
Databases	MongoDB, PostgreSQL, Firebase
Tools	MLflow, DVC, Power BI, Tableau, Streamlit, FastAPI, Jupyter

EXPERIENCE

- Co-founder & Full Stack Developer** | Avalence Software2024 – Present
 - Built production-grade supply-chain & inventory management systems with role-based access control (RBAC) and real-time data handling.
 - Tech stack: React, Firebase (Auth + Firestore), Vercel; handled client requirements, app customization, and debugging.
 - Delivered end-to-end client deployments, demonstrating ownership of complete software lifecycle from requirements to production.
- Machine Learning Intern** | AI AdventuresAugust 2024
 - Built and deployed ML pipelines with web scraping, data validation (pytest/flake8), and model training on high-dimensional data, deployed on AWS EC2.
 - Implemented CI/CD via GitHub Actions with Flask-based REST API serving; achieved automated testing and deployment pipeline.

PROJECTS

- DocuMind – RAG-Powered Document Intelligence System** | Python · LangChain · FAISS · Anthropic API · React · FastAPIBuilt an end-to-end Retrieval-Augmented Generation (RAG) application that allows users to upload documents and query them via a conversational interface powered by LLMs.
 - Implemented document ingestion pipeline: PDF parsing → chunking → embedding generation (sentence-transformers) → FAISS vector store indexing.
 - Designed LangChain retrieval chain with contextual prompt templates and structured output for accurate, hallucination-minimised responses.
 - Built React frontend with chat UI and FastAPI backend; evaluated quality using RAGAS metrics (faithfulness, answer relevancy).
- AutoAgent – Multi-Agent Task Automation System** | Python · LangGraph · CrewAI · Anthropic Claude API · StreamlitDesigned a multi-agent orchestration system where specialised AI agents collaborate to complete complex tasks: research, summarisation, code generation, and report writing.
 - Architected agent graph using LangGraph with tool-calling patterns: web search agent, code-writer agent, and a critic/reviewer agent for self-correction loops.
 - Integrated Claude API for agent reasoning; used structured JSON outputs to pass context between agents reliably.
 - Built Streamlit interface for task input, real-time agent trace visibility, and final report download.
 - Implemented fallback and degradation strategies when sub-agents fail, ensuring robust pipeline completion.
- Kraft.ai – AI-Powered Full Stack App Generator** | React · Node.js · PostgreSQL · Anthropic API · Gemini API · WebContainersFinal-year project: a production-deployed AI website builder that converts natural language prompts into live React/Node.js web apps with in-browser execution via WebContainers.
 - Engineered prompt templates and structured output schemas to generate syntactically correct, runnable code from free-text descriptions.

- Implemented multi-turn conversation context management so users can iteratively refine generated applications.
- Secured with JWT auth; used Prisma ORM + PostgreSQL for project persistence; deployed on Vercel.

Gemstone Price Prediction – ML CI/CD Pipeline | *Python · MLflow · DVC · AWS S3 · Flask · GitHub Actions*

End-to-end MLOps pipeline for a regression model: automated build, test, monitoring, and deployment with experiment tracking.

- Configured DVC for data versioning on AWS S3; MLflow for experiment tracking and model registry.
- GitHub Actions pipeline: lint (flake8) → unit tests (pytest) → model training → deployment to Render.
- Flask REST API serving predictions; integrated cost & latency logging for production monitoring.

ApnaKhata – Supply Chain Management Platform | *React · Firebase · Vercel · RBAC · Data Visualisation*

Comprehensive supply-chain management system with real-time paper rate tracking, automated Sales & Purchase Order lifecycles, and integrated ledger management for retailers and suppliers.

- Implemented RBAC (admin / retailer / supplier roles) with Firebase Auth and Firestore security rules.
- Built analytics dashboard with Chart.js; CSV/Excel export for ledger reports using SheetJS.

EDUCATION

B.Tech – Artificial Intelligence & Data Science

2022 – Present

AISSMS IOIT, Pune **CGPA: 8.23 / 10**

Class XII – Maharashtra State Board

MHTCET 94th %ile | JEE Mains 85th %ile | State Board 75%

CERTIFICATIONS & ACHIEVEMENTS

- Runner-up – GEEK-vishwa Hackathon (Credit Card Fraud Detection)
- Ethical Hacking – NPTEL by IIT Kharagpur (Elite + Silver | 80%)
- Advanced Python Certification – AI Adventures
- Data Science & Machine Learning Certification – AI Adventures
